COMMUNITY MEETING - PHASE II: TEN MILE

BUILDING RESILIENT COMMUNITIES WITH NATURE

Building Resilient Communities with Nature

What you love about your community:

- Scenic beauty and natural environment (Views of the marsh, wooded areas, wildlife, stars, lightning bugs, and native plants)
- Family and close-knit ties (Generational connections, neighbors helping one another, shared churches and traditions)
- Peace and safety (Quiet, peaceful community with low crime)
- Cultural heritage (Settlement community identity, farming traditions (sugar cane, small farms), and long time connections)

No, that's Somewhat Neutral, Mostly Yes, spot not right inaccurate Not sure accurate on!

Challenges you face:

- Rapid development and gentrification (Developers targeting waterfront property; rising taxes and loss of open space)
- Poor infrastructure (Clogged or unmaintained ditches, limited sidewalks, lack of lighting and safe walkways, speeding concerns)
- Government responsiveness (Residents feel local and state agencies aren't addressing infrastructure or environmental concerns quickly enough)
- Access to information (Better communication about planned changes and development)

General issues we heard:

- Need for infrastructure updates (Clean ditches, improve drainage, fix roads, and provide better sewer and water systems)
- Desire to preserve community land (Slowing development and protecting heirs' property)
- Public spaces and services (Decline of local stores, meeting places, and boat landings; desire to reestablish community park & recreation facilities)
- Land and affordability (Rising taxes and development pressures make it harder for families to hold on to property)
- Health and quality of life (Standing water breeds mosquitoes; tidal flooding leaves trash in ditches and on roads)

No, that's Somewhat Neutral, Mostly Yes, spot not right inaccurate Not sure accurate on!

Top Priorities / Urgent Issues (focused on Nature-Based Solutions)

- Flooding and drainage issues (Seafood Rd., Abe White Rd., Paul Swinton Ct., and Gadsdenville Rd. frequently flood during heavy rain or king tides)
- Erosion and subdivision impacts (New developments built up with topsoil worsen flooding for neighbors)
- More frequent and intense storms; flooding and erosion is clearly worsening
- Preserve forests and wildlife habitats (Maintain natural areas that support both environment and culture)
- Health and quality of life (Standing water breeds mosquitoes; tidal flooding leaves trash in ditches and on roads)

Notes / Comments:

Key Takeaways:

Ten Mile residents cherish their family roots, natural beauty, and close knit culture, but face growing challenges from rapid development, worsening flooding, poor infrastructure, and erosion. Protecting heirs' property, forests, wildlife, and green spaces while investing in better drainage, safer roads, and slowing unsustainable growth, are critical to preserving the community's heritage and resilience.
