## What is a Community Resilience Resource Fair?

Join us for a unique opportunity as we bring together community partners and community members to discuss what we've heard, mapped, and learned about flooding issues, storm impacts, and quality of life concerns from communities across the Cape Romain National Wildlife Refuge and lower Santee River (Charleston County) areas since spring, 2024. Following the presentation, you may visit with different agencies and organizations to ask questions and learn about programs, technical help, and funding to support local solutions.

## Why Come?

- Learn about the four project ideas for nature-based solutions to solicit input.
- Engage with key agencies or organizations that may have programs, resources, or responsibilities related to other issues that have been raised from community members over the course of the last year.
- Get answers to your questions!
